

**IN THE CLAIMS:**

Please amend claims 1-8 as follows:

1. (Currently Amended) A fertiliser product, ~~characterised in that it comprises~~ comprising a calcium and magnesium ameliorator containing not more than 20% by weight of magnesium lime and at least 20% by weight of quicklime (CaO) associated with a single, binary or ternary fertiliser and having a particle size distribution in the range from 2 to 7 mm.

2. (Currently Amended) A The fertiliser product according to claim 1, ~~characterised in that~~ wherein the calcium and magnesium ameliorator contains lime having a carbon dioxide (CO<sub>2</sub>) content below 4%.

3. (Currently Amended) A The fertiliser product according to claim 1, ~~characterised in that~~ wherein the fertiliser is ~~chosen~~ selected from among water-soluble potassium, phosphate and nitrogen fertilisers.

4. (Currently Amended) A The fertiliser product according to claim ~~4~~ 3, ~~characterised in that~~ wherein the

fertiliser ~~can comprise~~ comprises a tri super phosphate and/or a potassium chloride and/or a diammonium phosphate.

5. (Currently Amended) A The fertiliser product according to claim 5 ~~4~~, ~~characterised in that~~ wherein the tri super phosphate (TSP) contains 45% by weight of  $P_2O_5$  in the form of monocalcium phosphate.

6. (Currently Amended) A The fertiliser product according to claim 5, ~~characterised in that~~ wherein the potassium chloride (KCl) contains 60% by weight of  $K_2O$  in the form of potassium chloride.

7. (Currently Amended) A The fertiliser product according to claim 1, ~~characterised in that~~ wherein diammonium phosphate (DAP) contains 46% by weight of  $P_2O_5$  in the form  $HPO_4^-$  and also contains 18.5% nitrogen in ammoniacal form.

8. (Currently Amended) A method of obtaining a fertiliser product according to claim 1, ~~characterised in that~~ wherein the quantity of each ingredient in the fertiliser is determined in supplemented by a quantity of a calcium and magnesium ameliorator comprising lime in which the carbon dioxide content is below 4% after which the ameliorator followed by the fertiliser

ingredients are conveyed to a metering hopper, the hopper is emptied and the contents thereof are placed in a mixer and the product is recovered from the mixer and bagged.
